

MORNING BLEND #12

MORNING BLEND #12 is a nutritious liquid breakfast supplement suggested to be fed in the early morning. Readily digestible, there is no need to administer it more than 5 minutes before hanging the bridle. The product addresses several racing challenges: EIPH, Ulcers, Inflammation, allergies and Lactic Acid build up. LACTIC ACID, in particular, often is a major factor in stretch-run shortened strides.

An empty stomach is acidic, and studies show a proven relationship linking an incorrect PH balance with ulcers, and EIPH. If your stable does feed grain in the early morning, then these food-based, mineral-rich HSH herbal supplements will provide an alkalizing gut and easily digested nutrients that are not readily accessible in most commercial feeds. Note: Feeding typical grain-based foods close to a gallop can exacerbate EIPH, this liquid is thus ideal for bleeders.

MORNING BLEND #12 provides 35 essential food-based nutrients. Aloe, Slippery Elm, and Marshmallow Root in help coat the gut reducing and acid-gut discomfort. Trainers report that it add dapples, with the liver- cleansing Herbs, milk thistle seed, burdock root and dandelion. It has proven to encourage weight gain, as it also acts as an appetizer. It further provides an ideal stomach liner that can offset the ill-effects of orally administered Bute. The fully absorbable high-calcium Nettle strengthens bone. Food-based nutrients are key to these successes due to their better absorption and better digestion in the primitive equine gut.

Here's how MORNING BLEND #12 works: This blend also reduces harmful bacteria, virus and parasites. Viruses and bacteria require acidic environments. When trainers alkalinize their horses, they reduce the likelihood that bronchial bacteria and skin viruses. The bacteria, H-Pylori that may cause ulcers, is addressed in a natural herbs which benefit the organs instead of tearing them down.

In recent years, early morning feeding has become viewed as an inconvenience! Even so, the equine digestion period typically required of grain-based feed requires a routine morning feeding at 4:00 am. Avoiding this important early meal may be the cause of serious problems. Years ago, when most stables fed in the early morning, we had far fewer bleeders and fewer ulcers, too. As our mothers wisely told us, "Breakfast is the most important meal."

We provide **MORNING BLEND #12** as a fine powder that easily mixes with water. And the product's plastic container readily permits brief mixing/shaking. We suggest letting the solution thicken a few short minutes to allow aloe and slippery elm to reconstitute and offer their full healing and soothing effects. **MORNING BLEND #12** requires less than five minutes of digestion. Horses will come running for its great taste, reminiscent of a licorice-peppermint treat. Once your horse becomes familiar with its taste (administered initially for a couple days in an oral syringe), he will *lap it up from a tub* like a kitten with milk. After a couple days, a 1/2 cup of the liquid can be simply poured into the empty feed tub, making your morning feeding routine very simple.

Your bottom line with **MORNING BLEND #12**—Fewer bleeders, ulcers and even less mucus, all of which will be the direct result of your having made a few simple adjustments to improve overall equine health.

Best of luck racing!
